

Technical and Financial Specifications
VIDEOPLACE Installation
Myron W. Krueger

I have enclosed a diagram that shows the space requirements for a VIDEOPLACE installation. (Fig. 1) Technical requirements include 30 Amps at 110 VAC. (VIDEOPLACE ran on 100 VAC 50 cycles in Japan, so it probably could run on European power with a transformer.)

Financial requirements would include shipping expenses and door to door insurance for VIDEOPLACE equipment and travel, food and living accommodations for myself and my assistant, Katrin Hinrichsen while we attended Ars Electronica. I have enclosed a detailed list of VIDEOPLACE equipment to facilitate a judgment on shipping costs. Note that some of the standard equipment could be borrowed in Austria and large, heavy items like the backlighting assembly could be built in Austria. (This was the approach used when we exhibited in Japan last November.)
