

HOW TO USE THE BUTTONS

*Push the **center part** of the button lightly or stand on it for a while.*

*The **middle** button will bring you in the next drawing mode.
There are five drawing modes all together.*

*The **left** and **right** buttons will change the behaviour of the objects.
Your presence becomes part of the calculations of the program and
all objects will start to move towards you.
Depending on the drawing mode you are in, other things may change
as well, like the object and roomcolors, the choice of musical
instrument and the camera position.*

*If nobody stands on the buttons for a while, the program will change
the behaviour of the objects by itself.*
