

Kleiser-Walczak

Construction Company

KLEISER-WALCZAK

Kleiser-Walczak offers a full range of computer graphics production services from database construction to animation direction and production.

Using a McDonnell-Douglas 3Space digitizer and Wavefront modelling software, computer-generated objects are created from models with complex curved surfaces. Examples include an Eiffel Tower for Animatica of Spain, a baseball glove for the Golden Glove Awards and a Phantom of the Opera mask for an NBC miniseries.

Combining the talents of its staff with Wavefront Technologies software and hardware by Silicon Graphics and Hewlett-Packard, Kleiser-Walczak covers all aspects of computer animation from storyboarding to final production. Such productions include a spot for Radio City Music Hall seen during the 1987 Superbowl, ABC Eyewitness News station identification, and the current project of providing computer graphic imagery for a PBS production entitled, "The Astronomers."

The creation of computer-generated characters (Synthespians), however, is Kleiser-Walczak's specialty. Two independent films, "Sextone for President" and "Don't Touch Me," premiered at the 1988 and 1989 SIGGRAPH conferences feature computer generated characters of unprecedented detail and realism. Encoded from clay figures created in-house and animated using state-of-the-art technology, the characters, Nestor Sextone and Dozo have distinguished Kleiser-Walczak as a pioneering force in the character animation field.
